### AOD state-wide model of service – a consistent HHS AOD service approach

#### What HHS AOD services deliver
- The functions (and tasks) described in this table identify the core treatment types that are provided by HHS AOD services. These treatment types have been drawn from the Queensland Alcohol and Other Drug Treatment Service Delivery framework and CSCF v3.2 documents.
- Due to the resources available and the individual needs of the community, each HHS will provide varying levels of service.
- This document is intended to clarify what services we aspire to provide in each setting, and should be read in conjunction with the AOD Services – Model of Service, companion document.

#### For an individual

#### Tracking our progress

Measuring the impact of AOD treatment in the lives of clients, families and significant others and communities is essential to ensuring that standards of service delivery continue to be measured and improve.

#### Effective AOD services can impact

AOD clients often have multiple and complex needs, nevertheless, there is general consensus around a number of outcome domains that can be reasonably expected to be impacted by AOD treatment which could be measured.

#### For families and carers

#### Community
